

## EGE UNIVERSITY

### Alien Species Management Policy

Ege University (EU) acknowledges the harmful impact alien species can have on ecosystems and biodiversity. The university is dedicated to reducing the introduction and spread of these species while addressing their environmental consequences. This policy provides a framework for implementing effective strategies to prevent, monitor, and control alien species.

EU will adopt proactive measures to prevent alien species from being introduced into its facilities and nearby environments. Routine inspections and risk assessments will be carried out to detect potential pathways for their introduction and establish appropriate preventive actions. The university is committed to continuously enhancing its approach to managing alien species, ensuring that policies remain aligned with the latest scientific advancements, best practices, and regulatory standards.

Research and innovation in the field of alien species management will be prioritized to improve the efficiency and impact of these efforts. By enforcing this policy, EU strives to safeguard native ecosystems, protect biodiversity, and mitigate the ecological effects of alien species. Regular reviews of the policy will ensure it evolves with emerging knowledge and practices, reflecting EU's commitment to environmental stewardship.
